

## *Correction to* **Printed-Circuit Board for the FT-817 Panadapter**

There was an error in the PC board connections shown in Figure 2. The hole in the upper left, marked GND in Figure 2, is actually connected to +5 volts. If you don't connect anything to the hole, it won't matter. GND connections are available at the input and output, and most of the filter pins.

Thanks to Alan, VK2AXA, for pointing this out.
